Manufacturing's Business Process Guide

Electronic Data Interchange (EDI):

Electronic Data Interchange (EDI) is the electronic exchange of routine business transactions (material releases, shipping authorizations, shipment notifications, etc.) using standard data formats and **integrating them into software applications and business processes.**

It is recommended that the suppliers make arrangements to check their EDI mailbox on a daily basis.

EDI Transactions:

International Truck and Engine assembly plants will be using several EDI transactions to facilitate our communications with suppliers. These transactions are supported by ANSI X-12 and AIAG Automotive Industry Implementation Guides. The following is an explanation of each transaction currently utilized at the Indianapolis Engine Assembly Plant, the Melrose Park Engine Assembly Plant, and International Diesel of Alabama, LLC in Huntsville:

830 Material Release:

The 830 material release will be used primarily as a materials planning schedule and will contain actual engine orders, collateral demand, and production forecast. It is to be used by the supplier to schedule their production and purchase of raw material. It will reflect the plant's scheduled vacation shutdown, holidays, and projected customer orders.

846 Inventory Inquiry/Advice:

The 846 Inventory Inquiry/Advice will be used to communicate quantities consumed in production. It will note the invoice number, part number, and quantity. It should be used as a replenishment tool for SMI inventory. It is valuable for the accounts receivable department of the supplier because it will match the 820 for the check when it is issued.

856 Shipment Notification:

The 856 shipment notification must be sent by **all** suppliers to identify shipping information. This information **must be** communicated as soon as a shipment leaves the suppliers location and will be used to facilitate the receiving process for all engine plants.

International Truck and Engine Corporation
Engine Division
Manufacturing's Business Process Guide

997 Functional Acknowledgment:

The 997 functional acknowledgment must be sent and received by the respective engine plants and the supplier. This transaction is used to acknowledge retrieval of the electronic communication from the respective mailboxes. Supplier EDI and delivery performance will be measured and tracked based upon receipt and transmittal of this transaction set.

EDI Communications Problems:

If for any reason you experience problems relative to the electronic communication (sending/retrieval) of EDI data, please contact our **EDI Hot Line at (630) 753-6199.**

Supplier Options:

The EDI Coordinator for the engine plants will work with each supplier to determine the EDI implementation schedule and which combination of transactions will best fit the business need of our companies.

MRP (Manufacturing Resource Planning):

The requirements horizon is 12 weeks plus 3 months and contains customer orders and production forecast.

The schedules generated for suppliers are calculated on a manual basis by the material scheduling department. These schedules will be transmitted via the 830 EDI transaction set at a time determined by your material scheduling contact at the individual engine plant.

Engine Division

Manufacturing's Business Process Guide

Material Release - 830

Type	Regenerative
Frequency	As required (determined by Indianapolis/Melrose Park Park/Huntsville Materials)
EDI Transaction	ANSI-X12/AIAG - 830
Version	2040
Extent of Commitment:	
Shipping Authorization*	As authorized by the International ordering facility
Firm Commitment*	See Below
Planning Only*	See Below

Currently, the International engine facilities only send discrete quantities through the firm commitment time period.

***Forecasting Authorization:**

The 830 material release will be used as forecasting tool for the SMI material.

***Firm Commitment:**

Timeframe to be negotiated between the individual plant material control groups and the individual suppliers on a part by part basis. Suppliers are authorized to fabricate as necessary and ready for shipment, requirements in the firm commitment timeframe. International liability equals full purchased price of production parts or assemblies.

***Planning Only:**

Requirements beginning after the negotiated firm commitment and continuing through month 6 of the materials release are for information and planning only. International assumes no liability for these materials.

In addition, the International facilities will send alternate ship to locations to selected suppliers within the "N1*ST" segment.

**International Truck and Engine Corporation
Engine Division
Manufacturing's Business Process Guide**

Inventory Inquiry/Advice – 846

Type	Regenerative
Frequency	Daily
EDI Transaction	ANSI-X12/AIAG - 846
Version	4020

Application

This transaction will be used to transmit inventory information from one location to another location. The transaction will note the consumption and include the automatic triggering of replenishment based on inventory levels.

The 846 Inventory Inquiry/Advice will include the invoice number, date, part number, purchase order number, and quantity. That quantity is specified as quantity used or transfer quantity.

The transaction will be used as a tool in supplier managed inventory.

International Truck and Engine Corporation
Engine Division
Manufacturing's Business Process Guide

Shipping Notification - 856

Type	Regenerative with each shipment
Frequency	As required
EDI Transaction	ANSI-X12/AIAG - 856
Version	3050

Application:

The 856 shipment notification will be used by each supplier to communicate shipping information relative to each shipment being made for the Indianapolis, Melrose Park, or the Huntsville engine plants. **Unless otherwise specified**, this data is to be transmitted at the time a shipment leaves the supplier's location to insure that it is available for the engine plants prior to the arrival of the shipment.

Industry convention requires that each shipment be identified by a single unique number called a shipment identification number (SID). This number cannot be reused or repeated within a 1-year period. This number must be contained in the ship notice in the "BSN" segment.

The International Engine division intends to utilize the AIAG Quick Receive Guidelines. In accordance with these guidelines, a quick receive label is required to be printed in both bar code format and human readable format and affixed to the packing slip.

International requires that all suppliers identify each container with bar code labels in accordance with International's Supplier Packing and Shipping Standard (Form D-13). . In addition, any pallets containing multiple containers must have an additional master label or pallets containing mixed loads (more than one part number) must have an additional mixed load label.

International Truck and Engine Corporation
Engine Division
Manufacturing's Business Process Guide
Shipping Notification - 856 (continued)

International requires shippers to identify the International ship-to-location using the appropriate codes contained in the Appendix of Ship-To Location Codes (Indianapolis = 006, Melrose Park = 083, Huntsville = 040).

See the document Appendix of Ship-To Location Codes found in the Other Documentation on the ISN website. While several codes have been provided, only the International ship-to code and the International assigned supplier code indicating shipping point are required (use the 7 position supplier code transmitted in the "N1*ST" segment of the material release transaction (830).

International also requires shippers to identify the International component part number in the LIN segment of the detail level of the 856. International component part numbers must be identified with a "BP" identifier.

The "SCAC" code is a four character alphabetic code used by the transportation industry to identify member companies. This code must be transmitted in the TD5 segment. Authorized carriers are determined and communicated by International's corporate transportation department. If you need a "SCAC" code, please contact corporate transportation. Please refer to the International Supplier website / Other Documentation / Logistics / International SCAC Code Listing to find SCAC codes. If a deviation from an authorized carrier is needed, please contact the individual plant traffic department for a carrier and "SCAC" code to use in the 856 transactions.

The trailer number (the qualifier is TL) is transmitted in the TD3 segment. The trailer number is necessary in tracing and expediting a delivery.

Additional items of importance are the bill of lading number, the packing list number, and the carrier "pro" number. These items are transmitted at the shipment level in the "REF" segments with the following qualifiers:

Bill of Lading = BM

Packing Slip = PK

Pro Number = CN

A pro number is necessary in the tracing and expediting of deliveries. Carriers will generally "pre-assign" a series of "pro" numbers to a shipper to assure their availability concurrent with the shipment. Bill of lading and packing slip numbers are necessary in the processing of freight bills and material receipts.

International Truck and Engine Corporation
Engine Division
Manufacturing's Business Process Guide

Shipping Notification - 856 (continued)

The "TD1" segment of the 856 transactions contains information identifying packaging, quantities, and weight. The following is a list of the valid packaging codes for the engine plants:

<u>Description</u>	<u>Code</u>
Plastic Pallet	PLT79
Plastic Tote Box (small/medium)	TBN79
Plastic Xytec Box (knockdown)	BOX79
Plastic Molded Tray	TRY64
Wire Mesh Basket (any size)	BSK51
Metal Rack	RCK58
Metal Pallet	PLT58
Cardboard Box	BOX25
Wood Pallet	PLT94
Wood Engine Skid	SKD94
